Meal plans

Create a weekly meal plan for each client, with your own meal times, accurate nutrition from the food library or AI, and a branded PDF to share.

Where to find it: Clients → open a client → Meal plan tab

IN SHORT

Each meal plan covers one week (Monday to Sunday) for one client. You build it as a draft, then publish it. Clients only ever see published weeks.

IN THIS GUIDE

1 Start a plan
2 Your meal times
3 Add a meal
4 Pick meals from the library
5 Estimate with AI
6 Extra nutrient columns
7 Draft a whole week with AI
8 Notes, publishing and duplicating
9 Share as PDF or Excel

Updated 12 October 2026 · nusi.in

1 Start a plan

1. Open the client and go to the Meal plan tab (or click Meal plan on their summary in the Clients list).
2. Click Start week 1. The week starts next Monday (or today if it is Monday).
3. Use New week to add more weeks. The **Week N** chips switch between weeks; a dot shows whether each is a draft or published.

2 Your meal times

The plan is a grid: meal times down the side, the 7 days across. Meal times are the same for **all** your clients.

- Default meal times: Breakfast, Mid-morning, Lunch, Evening snack, Dinner.
- **Rename** a meal time: click its name (for example "First meal", "Mid snack", "Last meal"). Use "<standard name>" changes it back.
- **Hide** a meal time you don't use: click its name, then Hide. It disappears for every client.
- Add slot brings back other meal times: Cleansing water, Early morning, Mid-breakfast, Evening snack 1 and 2 and more.

GOOD TO KNOW

You cannot hide a meal time that already has meals in this week, or the last remaining meal time.

3 Add a meal

1. Click + in the right day and meal time.
2. Choose Type it to write the meal yourself, or From library to pick it.
3. Fill in **Meal**, **Qty** (a number, e.g. 2) and **Unit** (e.g. katori, g).
4. Fill in **kcal** and **Macros**: Protein, Carbs, Fat and **Fibre** (in grams).
5. Optionally add a **Note for the client** and the **Ingredients** (bullets and bold work).
6. Click Add meal.

TIP
Click an existing meal to edit it (Save) or Remove it. If you close the form with unsaved changes, NUSI asks before discarding them.

4 Pick meals from the library

- **My foods:** meals you typed before; they are saved automatically for reuse.
- **Your recipes:** your published recipes.
- **Food library:** thousands of foods (type at least 2 letters). Calories, macros and other nutrients fill in automatically for the standard serving.

GOOD TO KNOW
Changing the quantity does not recalculate the nutrients automatically. Update the numbers if you change the portion.

5 Estimate with AI

1. Type the meal name (for example "2 ragi dosa with sambar").
2. Click Estimate with AI .
3. Calories, protein, carbs, fat, fibre and your extra nutrients are filled in, with the message "Filled in by AI. Check the numbers, then click Save to keep them."
4. Check the values and click Save .

GOOD TO KNOW
Each estimate uses one AI credit. AI values are estimates; always check them.

6 Extra nutrient columns

Besides calories, protein, carbs, fat and fibre, you can track any nutrient you need (sodium, iron, vitamin D…).

1. In the meal form, click Add nutrient .
2. Choose one **From the food database**, or create **Your own** with a name and unit.
3. The new column appears for every client and meal (up to 12 columns).

TIP
Removing a column (×) hides it everywhere; values already entered are kept and come back if you add the column again.

7 Draft a whole week with AI

1. Click AI draft .
2. Choose the **Meal slots to fill** and optionally write guidance in **Anything to steer it?** (e.g. "vegetarian, low GI, South Indian").
3. If the week already has meals, decide whether to replace them.
4. Click Generate draft . The result is always a draft for you to review.

GOOD TO KNOW
Check allergies and medical conditions before publishing an AI draft. The AI draft button is greyed out if AI is off for your practice (Settings → AI).

8 Notes, publishing and duplicating

- **Nutritionist's notes:** general guidance for the week. Saved when you click away; shown to the client and printed on the PDF.
- Publish to client : the client can now see this week in their app (needs at least one meal). Unpublish hides it again.

- **Duplicate**: copies the week to the following Monday as a new draft.
- **Delete**: removes the week and its meals.

> GOOD TO KNOW
> Clients see the published week covering today, or the latest published week. Drafts are never shown to clients.

9 Share as PDF or Excel

- **PDF**: a branded plan with your logo, a cover, the client's profile, day-by-day tables, a weekly nutrition summary (calories, protein, carbs, fat, fibre) and your notes.
- **Excel**: two sheets, the week grid and a list of all meals.
